

## Project Update: Granular Activated Carbon Filtration System

Since February 2021, the City of Lomita has been in the process of upgrading its water infrastructure with a new Granular Activated Carbon (GAC) filtration system at the Cypress Water Production Facility.

Following the excavation for new underground pipes, the project has achieved several milestones:

- Completed a critical MWD tie-in
- Installed re-bar, anchor bolts, and concrete forms for the GAC slab
- Pressure tested the underground piping
- Installed electrical conduit

The installation of the GAC vessels is expected to begin in Spring 2022. All preparations are being made to bring the project online by Summer 2022.

The City is committed to sharing information and helping community members understand where their water comes from. Residents are encouraged to visit [www.LomitaWater.com](http://www.LomitaWater.com) to find all the latest water-related information and sign up for Lomita Water News Alerts.
